**SUSTAINABLE PESCATORIANS: ENSURING THE SEAFOOD INDUSTRY HAS RESPONSIBLE PRACTICES**

**WEDNESDAY, FEBRUARY 16**  
**4:00 P.M.**

**Presented by Chef Rick Moonen, Master Development Chef for Perry's Restaurants**

*Chef Rick Moonen*

Celebrity Chef Rick Moonen is an American seafood chef and an early adopter of sustainable fishing practices. Known as the "Godfather of Sustainability," Chef Moonen will educate audiences on solutions to prevent illegally caught and sourced seafood and share "sea-to-table" best practices. In addition, he'll serve up some tips for delicious seafood dishes that participants are sure to enjoy!

**UNEQUIVOCAL & UNPRECEDENTED: CLIMATE CHANGE IN THE OCEAN**

**WEDNESDAY, MARCH 16**  
**4:00 P.M.**

**Presented by Dr. Sarah Cooley, Director of Climate Science and Jon Paul "J.P." Brooker, Florida Director for the Ocean Conservancy**

*Dr. Sarah Cooley*

The science of climate change is clear: human activity undeniably causes rapid planetary changes in climate unlike anything in recorded history. Climate change is fundamentally altering systems in the ocean, Florida's backyard and playground, and Floridians are feeling its effects. Fortunately, Florida's citizens and communities are mobilizing to address ocean-associated climate change and sustain the region's natural treasures for future generations. Learn about what is happening to our ocean systems and what actions can be taken.

**LEADING THE ELECTRIFICATION REVOLUTION**

**WEDNESDAY, APRIL 13**  
**4:00 P.M.**

**Presented by Ms. Cynthia Williams, Global Director, Sustainability, Homologation & Compliance, Ford Motor Company**

*Ms. Cynthia Williams*

Ford Motor Company is committed to fighting climate change, investing more than \$30 billion through 2025 to electrify its most iconic nameplates. Ford is getting real traction with their Ford+ plan, doing the hard work to reinvent itself for this new era and break constraints to lead the electric revolution at scale. In the process, Ford is reimagining how electric vehicles – and the batteries that power them – are designed, manufactured and recycled as part of an ultra-efficient, carbon neutral electric vehicle manufacturing ecosystem. Learn how Ford is doing its part to address climate change and accelerate progress to net-zero no later than 2050 by reducing emissions in three areas that account for approximately 95% of its carbon emissions: vehicle use, manufacturing and supply chain, and ensuring that no one is left behind.
